## **DETAILED ACTION**

### ***Response to Amendment***

This office action is in response to correspondence sent on December 30, 2008. Claims 1-22 are pending for further consideration.

### ***Response to Arguments***

Applicant's arguments filed October 16, 2008 have been fully considered but they are moot in view of new ground of the rejections.

### ***Allowable Subject Matter***

Claims 2-20, and 22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1, and 21 are rejected under 35 U.S.C. 102(e) as being anticipated by Haverinen et al. (U. S. Patent 7,472,273).
2. Regarding Claim 1, Haverinen teaches and describes a method for establishing and managing a trust model between an identification module and a radio terminal , said method comprising: authenticating said radio terminal by said identification module, said authenticating being carried out by radio terminal authentication arrangements that are provided either to said identification module by a mobile radio-telephony network at the time of an initialization or at the time of an updating, or to said radio terminal by the identification module; and controlling by said module at least one specific characteristic of the radio terminal , said specific characteristic being previously transmitted by radio-telephony to said identification module from a secured server of said mobile radio-telephony network ([0194-0206]).
3. As per Claim 21, Haverinen teaches and describes an identification module in a radio terminal comprising a device for memorizing at least one authentication algorithm, a calculation device for executing at least applying an authentication key to said authentication algorithm as well as at least one authentication algorithm memorized in the identification module, a communication device, a device for initiating a revocation and a revocation device for revoking said authentication key, a device for memorizing a specific characteristic of the radio terminal and a device for actuating an updating algorithm for updating said authentication key, the communication device being capable of providing at least one authentication key to the radio terminal and receiving data send from a secured server of a mobile radio-telephony network ([0194-0206]).
